*	* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rule 70.16 and 70.17).						
**	Any r	lacement sheet containing such amendments must be referred to under	item 1 and annexed to this report.				

INTERNATIONAL PRELIMINARY EXAMINATION REPORT PCT/JP03/04615 IV. Lack of unity of invention 1. In response to the invitation to restrict or pay additional fees the applicant has: restricted the claims. paid additional fees. paid additional fees under protest. neither restricted nor paid additional fees. This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees. 3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is complied with. not complied with for the following reasons: The common matter of claims 1-29 is an absorber of "a structure of at least two layers consisting of, as a lower layer, an exposure light absorbing layer composed of an absorber of an exposure light, and as an upper layer, a low-reflectance layer composed of an absorber of an inspection light used for a mask pattern inspection." However, results of a search show that the constitution of the above absorber is found out to be conventionally known prior art disclosed in document [JP, 2001-237174, A (Oki Electric Industry Co., Ltd.), August 31, 2001 (08.31.01), paragraphs 0047-0062, Fig. 7]. In consequence, the constitution of the above absorber is not a special technical feature in the meaning of the second sentence of PCT Rule 13.2. Further, claims 1-8, 11-23 and 29-44 are inventions having the same technical feature in terms of composition and constitution of a lower reflection of a Ta compound serving as an absorber layer of a reflection type mask. Therefore, no common matter is found out among claims 1-8, 11-23 and 29-44, claims 9 and 10, claims 24-26 and claims 27 and 28. Also, no other common matter exists that could be considered a special technical feature in the meaning of the second sentence of PCT Rule 13.2; therefore, no technical relationship in the meaning of PCT Rule 13 can be found among these different inventions. 4. Consequently, the following parts of the international application were the subject of international preliminary examination in establishing this report: all parts. the parts relating to claims Nos. _

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

Internation No.
PCT/JP03/04615

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement							
1. Statement							
Novelty (N)	Claims	1-5, 7, 8, 13, 15-26, 30-44	YES				
	Claims	6, 9-12, 14, 27-29	NO				
Inventive step (IS)	Claims	1, 3-5, 7, 30, 32-35	YES				
	Claims	2, 6, 8-29, 31, 36-44	NO				
Industrial applicability (IA)	Claims	1-44	YES				
	Claims		NO				

2. Citations and explanations

The inventions described in claims 3-5, 7, 30 and 32-35 appear to involve an inventive step over document 2 [JP, 2001-237174, A (Oki Electric Industry Co., Ltd.), August 31, 2001(08.31.01)] cited in the ISR.

The inventions described in claims 6, 9-12, 14 and 27-29 do not appear to be novel based on document 2 cited in the ISR.

The inventions described in claims 16 and 18-23 do not appear to involve an inventive step over document 2 cited in the ISR.

The inventions described in claims 13, 24-26, 36, 39 and 41-44 do not appear to involve an inventive step over document 2 and document 3 [JP, 6-95358, A (Toppan Printing Co., Ltd.), April 8, 1994 (04.08.94)] cited in the ISR.

Document 3 describes production of a photomask, wherein films of different layers are formed by continuously changing injection gases in the same chamber.

The invention described in claims 2, 8 and 31 do not appear to involve an inventive step over document 2 and document 4 [US, 5754619, A (NEC Corporation), May 19, 1998 (05.19.98)] cited in the ISR.

Document 4 describes an X ray-mask, wherein an X ray absorber layer is chemically stabilized as amorphous.

The inventions described in claims 15, 17, 37, 38 and 40 do not appear to involve an inventive step over document 2 and document 5 [JP, 7-333829, A (Hitachi Ltd.), December 22, 1995 (12.22.95)] cited in the ISR.

Document 5 describes a reflection type X ray mask using a buffer layer comprising Cr.
